Document owner
People and Culture

Effective date
01 July 2025

CONFIDENTIAL - FICTIONAL EDUCATIONAL DATA

DOCUMENT CONTROL

Document status and use

This handbook defines the employment practices used by GreenLoop Robotics during FY2025. Local law and signed employment agreements take precedence if they provide a greater entitlement.

Field	Value
Document ID	HR-HBK-2025-v1.4
Version	1.4
Owner	People and Culture
Effective date	01 July 2025
Next scheduled review	01 January 2026
Intended audience	All employees, contractors, interns, and people managers
Classification	Confidential - fictional educational dataset

This document describes a fictional company and fictional performance data. It is intentionally written as realistic internal material for retrieval, grounding, fact-checking, and citation exercises.

Version history

Version	Date	Summary	Approved by
1.0	10 Jan 2025	Initial controlled release	Executive Committee
1.4	01 July 2025	Current release with FY2025 operating updates	People and Culture

CONTENTS

Contents

Section numbers are stable anchors for retrieval and human review.

Section	Title
1	Company profile, mission, and values
2	Employment principles and responsibilities
3	Work modes and role eligibility
4	Weekly schedules and collaboration hours
5	Remote workspace and company equipment
6	Information security and identity controls
7	Data classification and customer images
8	Acceptable use and generative AI
9	Communication, meetings, and documentation
10	Leave and time away
11	Performance and professional development
12	Expenses, travel, and field assignments
13	Conduct, inclusion, and respectful work
14	Engineering laboratory safety
15	Customer and field-site safety
16	Incident reporting and business continuity
17	Conflicts, gifts, and ethical decisions
18	Corrective action and employee concerns
19	Acknowledgement and policy contacts

SECTION 1

Company profile, mission, and values

GreenLoop Robotics designs and operates intelligent waste-sorting systems for universities, transport hubs, offices, hospitals, and retail sites. The company combines edge AI, electromechanical routing, and a cloud operations platform.

Operating footprint

GreenLoop was founded in 2021. The company maintains an administrative office and product center in Amman, an engineering and validation laboratory in Ramallah, and regional field teams that serve customer sites. At the end of Q3 FY2025, the workforce was 148 employees.

Mission

Our mission is to make correct waste separation easy, measurable, and scalable. Product decisions must balance environmental impact, user safety, classification quality, serviceability, and responsible handling of customer data.

Values

- Evidence before confidence: measure performance and state uncertainty clearly.
- Design for the field: laboratory success matters only when systems work reliably at customer sites.
- Own the full loop: document decisions, monitor outcomes, and correct failures.
- Respect people and data: protect colleagues, customers, bystanders, and confidential information.
- Improve in small releases: prefer reversible, tested changes over unreviewed large changes.

No employee may present laboratory accuracy as guaranteed field accuracy. Performance claims must include the test conditions and the approved source.

SECTION 2

Employment principles and responsibilities

Every employee is responsible for safe work, accurate records, confidentiality, respectful conduct, and timely escalation of risks. Managers are responsible for applying policy consistently and documenting exceptions.

Employment categories

Category	Typical arrangement	Policy notes
Regular full-time	40 hours per week	Eligible for standard benefits and leave
Regular part-time	20 to 32 hours per week	Benefits prorated where local law permits
Fixed-term	Project or time limited	End date stated in signed agreement
Intern	Supervised learning placement	No unsupervised lab or customer access
Contractor	Services agreement	Access limited to assigned systems and term

Employee responsibilities

- Keep personal, payroll, emergency, and contact information current.
- Complete security, safety, privacy, and conduct training by assigned deadlines.
- Record working time and project costs accurately when the role requires it.
- Ask for clarification before performing work outside authorization or competence.
- Report suspected misconduct, unsafe conditions, data exposure, or product risk without delay.

Manager responsibilities

Managers approve work modes, access, travel, overtime, and exceptions only within their delegated authority. A manager may not waive security controls, bypass laboratory safety procedures, or conceal a quality event to meet a delivery target.

SECTION 3

Work modes and role eligibility

Work mode is based on the duties of the role, not seniority. The signed job profile and the matrix below establish the default. Managers may require temporary onsite attendance for launches, audits, incidents, training, or customer commitments.

Default rule: software and AI employees may work remotely up to three days per week; hardware and validation employees normally work onsite four days per week.

Role group	Maximum remote days	Minimum onsite expectation	Approval
Software, AI, data, design	3 per week	Tuesday and Thursday	Manager schedule approval
Finance, people, marketing	3 per week	Tuesday and Thursday	Manager schedule approval
Customer success and support	2 per week	Coverage roster controls	Team lead approval
Hardware and validation	1 per week	4 laboratory days	Lab manager approval
Field service	As roster permits	Customer-site schedule	Regional operations approval
Interns in first 30 days	0 by default	Onsite onboarding	Department head exception

Remote work is a location, not a reduction in availability

Remote-eligible employees remain responsible for assigned outcomes, customer commitments, core collaboration hours, security controls, and a professional working environment. Remote days cannot be accumulated, transferred to another week, or treated as leave.

Exceptions

- A documented medical accommodation follows the accommodation process and may differ from this matrix.
- A temporary project exception requires a start date, end date, business reason, and manager approval.
- Work from another country requires People, Legal, Tax, and Information Security approval before travel.

SECTION 4

Weekly schedules and collaboration hours

GreenLoop uses flexible start and finish times while protecting predictable overlap for cross-functional work. The standard workweek is Sunday through Thursday for regional teams unless a local contract states otherwise.

Core collaboration window

All employees must normally be reachable from 10:00 to 15:00 Asia/Hebron on scheduled working days. Field assignments, approved leave, customer maintenance windows, and documented accommodations are valid exceptions.

Planning expectations

- Publish the weekly work location in the team calendar by 16:00 Thursday.
- Schedule focused work outside the core window when practical.
- Do not schedule recurring meetings before 09:30 or after 16:30 without team consent.
- Use the support roster, not personal availability, for after-hours customer coverage.
- Obtain written approval before overtime where local law or contract requires it.

Attendance

Repeated unavailability during core hours, failure to attend required laboratory work, or inaccurate location reporting may result in a work-mode review. A single connectivity failure is not misconduct when promptly communicated and reasonably mitigated.

Tuesday and Thursday are common onsite collaboration days for remote-eligible teams. Hardware and validation schedules include four laboratory days each week.

SECTION 5

Remote workspace and company equipment

A remote workspace must support confidential conversation, safe equipment use, stable connectivity, and reliable participation. Company equipment remains GreenLoop property and may be inspected, updated, or recovered.

Standard equipment

Item	Standard	Employee responsibility
Laptop	Managed, encrypted corporate device	Do not share or disable controls
Authentication key	FIDO2 key where assigned	Keep separate from unattended laptop
Headset	Noise-reducing headset	Use for confidential calls
Home office allowance	Up to USD 600 at hire	Submit receipts within 60 days
Internet support	Up to USD 40 per month	Maintain a commercially reasonable connection

Minimum workspace controls

- Lock the screen whenever the device is unattended.
- Prevent family members, visitors, and housemates from using company devices.
- Use a privacy screen when confidential content may be visible to others.
- Do not discuss customer incidents in cafes, public transport, or shared public rooms.
- Store hardware samples, access cards, and printed material in a locked location.

Loss or damage

Lost, stolen, or potentially accessed equipment must be reported to the Security Hotline within 30 minutes of discovery. Employees must not delay reporting while attempting to locate a device.

SECTION 6

Information security and identity controls

Security controls apply in every work location. No manager may approve bypassing multi-factor authentication, endpoint management, encryption, least privilege, or incident reporting requirements.

Remote access to internal systems requires a managed company device, multi-factor authentication, and the GreenLoop VPN.

Required controls

- Use only the assigned identity; shared accounts are prohibited except approved service accounts.
- Use multi-factor authentication for company and customer systems.
- Connect through the GreenLoop VPN when accessing internal engineering, finance, or customer support systems remotely.
- Install updates within the endpoint management deadline; critical updates may be forced immediately.
- Use the company password manager and unique credentials for every service.
- Approve access requests only when the business need and requested duration are clear.

Privileged access

Production, model deployment, customer image review, and finance administration use time-bound privileged roles. Privileged actions are logged and reviewed. Engineers must use a separate administrative identity when instructed by Information Security.

Prohibited actions

Employees may not disable endpoint protection, send credentials through chat, copy tokens into tickets, expose local development ports to the internet, or use unapproved remote desktop tools. Suspected credential disclosure requires immediate password rotation and incident reporting.

SECTION 7

Data classification and customer images

Information must be labeled and handled according to sensitivity. Customer camera images can contain people, badges, documents, or location details and are treated as Restricted unless an approved de-identification process changes the classification.

Class	Examples	Minimum handling
Public	Published product pages and approved press releases	Approved public channel
Internal	Team procedures and non-sensitive project plans	Company account only
Confidential	Contracts, forecasts, employee records	Need-to-know access and encryption
Restricted	Customer images, credentials, security logs	Approved systems, logging, time-bound access

Customer image rules

- Do not download customer images to personal devices or personal cloud storage.
- Use the controlled review console when investigating classification quality.
- Do not include identifiable customer images in presentations, demos, or model experiments without written approval.
- Record the ticket, purpose, dataset, and retention period for every approved export.
- Delete approved working copies when the documented task is complete.

Paper records

Printing Confidential or Restricted information requires a business need. Printed records must be collected immediately, stored in a locked cabinet, and destroyed using approved secure disposal.

SECTION 8

Acceptable use and generative AI

Company systems are provided for legitimate work. Limited personal use is acceptable when lawful, infrequent, secure, and not disruptive. GreenLoop may log and monitor company systems as allowed by law and policy.

Generative AI rules

- Use only AI services listed in the approved tools register.
- Do not submit Restricted data, customer images, credentials, source code marked restricted, or non-public financial data to public AI services.
- Review generated code, calculations, citations, and factual claims before use.
- Label AI-assisted customer content when the review procedure requires disclosure.
- A human owner remains accountable for every AI-assisted decision and deliverable.

Software and storage

Install software through the managed catalog or obtain Security approval. Personal email, consumer file-sharing services, unapproved browser extensions, and removable media must not be used for company data.

Testing and simulation

Security testing, load testing, scanning, and adversarial model evaluation require a defined scope and system owner approval. Testing customer environments without explicit authorization is prohibited.

Public AI tools must never receive customer images or unpublished Q3 financial information.

SECTION 9

Communication, meetings, and documentation

GreenLoop is documentation-first. Decisions that affect customers, product behavior, safety, finance, or policy must be recorded in the designated system and cannot remain only in chat or a meeting recording.

Channel guidance

Channel	Use	Not suitable for
Project record	Requirements, decisions, owners, evidence	Casual conversation
Ticketing system	Incidents, support cases, defects	Untracked policy approval
Chat	Coordination and quick questions	Final decisions or Restricted data
Video meeting	Ambiguous, sensitive, or collaborative topics	Avoiding written follow-up
Email	External formal communication	Credentials or large customer datasets

Meeting standard

- Publish an agenda and required decision before the meeting.
- Invite only people needed to decide, advise, or execute.
- Record decisions, dissent, owner, and due date in the source system.
- Do not record meetings by default; obtain consent and define retention when recording is necessary.

Asynchronous work

A useful async update states the outcome, evidence, uncertainty, decision requested, owner, and deadline. Employees should not create artificial urgency by sending the same request across several channels.

SECTION 10

Leave and time away

GreenLoop encourages employees to take planned time away and to avoid working while ill. Entitlements below are company standards; local law or contract may provide more.

Leave type	Annual standard	Notice or evidence
Annual leave	20 working days	Request 10 days ahead for 3 or more days
Sick leave	10 paid working days	Notify manager before core hours where possible
Learning leave	3 paid working days	Approved development plan
Volunteer leave	2 paid working days	Approved community activity
Bereavement	3 to 5 paid days	People team confirms entitlement
Parental leave	Per local plan and law	People team planning process

Coverage

Before planned leave, employees identify an acting owner, document open risks, update deadlines, and transfer required access without sharing credentials. Managers must distribute coverage fairly and must not require routine availability during approved leave.

Unplanned absence

Employees should use the emergency contact path when they cannot access normal systems. Health details should be shared only with People and Culture or as required by local law, not broadly with the team.

SECTION 11

Performance and professional development

Performance is evaluated through outcomes, quality, collaboration, safety, and values. Physical presence alone is not a performance measure, and remote employees are evaluated using the same role expectations as onsite peers.

Review cycle

- Quarterly check-in: priorities, evidence, support, and development actions.
- Midyear review: progress against role outcomes and behavior expectations.
- Annual review: sustained impact, capability, values, and compensation input.
- Project retrospective: lessons from releases, incidents, field deployments, and audits.

Evidence

Useful evidence includes validated product metrics, customer outcomes, quality improvements, incident learning, delivery reliability, documentation, mentoring, and effective risk escalation. Unsupported claims, activity volume without outcomes, or concealed defects are not positive performance evidence.

Learning support

Regular employees may receive an annual development budget of up to USD 1,200 with manager approval. Training must connect to a current or planned capability. Employees who attend external training share relevant learning without disclosing licensed material.

A product target is not an achieved result. Reviews must distinguish planned, laboratory, pilot, and field performance.

SECTION 12

Expenses, travel, and field assignments

Business expenses must be necessary, reasonable, documented, and submitted within 15 calendar days. Employees may not approve their own expenses or divide a purchase to avoid an approval threshold.

Common limits

Expense	Standard	Approval
Home office setup	Up to USD 600 at hire	Manager and People
Monthly internet	Up to USD 40	Manager
Daily meals during travel	Country schedule	Manager
Hotel	Preferred rate or justified alternative	Travel approver
Prototype components	Project budget	Engineering cost owner
Emergency field purchase	Minimum required to restore safety or service	Retrospective approval within 24 hours

Travel security

- Use the travel device profile when assigned.
- Do not leave devices or samples unattended in vehicles.
- Confirm data and encryption restrictions before international travel.
- Report border inspection, device seizure, or unexpected device access immediately.

Field time

Travel to and work at customer sites follows the approved roster and local labor requirements. Field staff must record travel, installation, maintenance, and incident time accurately for safety and project costing.

SECTION 13

Conduct, inclusion, and respectful work

GreenLoop prohibits discrimination, harassment, retaliation, bullying, threats, and humiliating conduct. The policy applies in offices, laboratories, customer sites, travel, chat, video calls, social events, and work-related online spaces.

Expected conduct

- Challenge ideas with evidence without attacking people.
- Use names and forms of address requested by colleagues.
- Provide accessible materials and reasonable notice for participation.
- Do not circulate offensive content or use customer data as entertainment.
- Intervene safely or report conduct that may harm another person.

Reporting options

Concerns may be raised with a manager, People and Culture, the Ethics Channel, or any executive. An employee does not need to confront the person involved before reporting. Retaliation for a good-faith report or participation in an investigation is prohibited.

Confidentiality

Investigations are handled as privately as practical, but absolute confidentiality cannot be promised. Information is shared only with people who need it to assess, investigate, decide, or comply with law.

SECTION 14

Engineering laboratory safety

Only trained and authorized personnel may operate energized prototypes, lifting devices, battery systems, cutting tools, or moving sorter assemblies. Remote work approval never authorizes unsupervised laboratory work at home.

Core controls

- Complete the task risk assessment before first use or after a material change.
- Use lockout and tagout before entering a guarded mechanical area.
- Verify isolation with an approved instrument before touching conductors.
- Wear required eye, hand, hearing, and footwear protection.
- Use a spotter for heavy modules and follow the posted lifting limit.
- Keep aisles, emergency stops, fire equipment, and electrical panels clear.

Prototype control

Every prototype has an owner, revision, hazard label, test plan, and status. A unit marked NOT FOR FIELD USE may not be demonstrated to a customer. Guards and emergency stops cannot be removed to accelerate a test.

Near misses

A near miss is reported with the same urgency as an injury when a small change could have caused harm. Work pauses until the immediate hazard is controlled. Reporting a near miss in good faith is expected behavior, not failure.

Hardware and validation employees normally work in the controlled laboratory four days per week because energized, mechanical, and waste-contact testing cannot be performed safely as ordinary remote work.

SECTION 15

Customer and field-site safety

Customer rules and GreenLoop rules both apply at field sites. When they differ, employees follow the safer lawful control and contact Regional Operations before proceeding.

Before work

- Confirm site contact, scope, access, isolation, waste handling, and emergency arrangements.
- Review recent service history and open hazards.
- Inspect tools, test instruments, PPE, and replacement parts.
- Establish a safe work zone that separates the public from moving equipment.

During work

Stop the sorter, isolate energy, and prevent automatic restart before clearing a jam or opening a guarded area. Suspected sharp, biological, chemical, pressurized, hot, or electrical waste is not handled by GreenLoop staff unless a specific approved procedure exists.

Completion

The technician restores guards, tests emergency stops, removes tools and waste, records changes, and obtains site acknowledgement. A unit with an unresolved safety defect remains out of service and is labeled accordingly.

SECTION 16

Incident reporting and business continuity

Fast reporting protects people and customers. Employees report facts known at the time and clearly label assumptions. No employee is expected to complete an investigation before raising an alert.

Event	Initial notification	Primary channel
Injury, fire, exposed energy	Immediately after emergency action	Site emergency process and Safety Hotline
Lost device or credential	Within 30 minutes of discovery	Security Hotline
Suspected customer data exposure	Within 30 minutes	Security Incident channel
Product safety defect	Immediately and before further use	Quality escalation
Major service outage	Within 15 minutes	Operations incident channel
Conduct concern	As soon as reasonably practical	Manager, People, or Ethics Channel

Continuity priorities

The order of priority is life safety, containment, customer communication, service restoration, evidence preservation, and learning. Teams use approved backups and failover procedures; they do not create unreviewed shortcuts that increase security or safety risk.

Post-incident review

Reviews focus on system conditions, detection, decisions, and prevention. Records identify what is known, what remains uncertain, corrective owners, due dates, and verification evidence.

SECTION 17

Conflicts, gifts, and ethical decisions

Employees act in GreenLoop's legitimate interests and disclose personal interests that could affect, or appear to affect, judgment. Disclosure is required before participating in the relevant decision.

Examples requiring disclosure

- A financial interest in a supplier, customer, or competitor.
- Hiring, supervising, or selecting a close relative or household member.
- Outside work that overlaps with GreenLoop products, customers, or working time.
- Use of company information, equipment, or contacts for a private venture.
- A personal relationship with a bidder or audit subject.

Gifts and hospitality

Cash and cash equivalents are prohibited. Modest business hospitality may be accepted when lawful, infrequent, transparent, and not connected to a pending decision. Gifts above USD 75 require written Ethics approval; stricter customer or government rules prevail.

Accurate records

Employees may not create false invoices, time entries, test results, quality records, expense claims, forecasts, or customer statements. Pressure to change or omit a material fact must be reported.

SECTION 18

Corrective action and employee concerns

GreenLoop aims to correct problems fairly, promptly, and proportionately. Depending on severity, history, law, and risk, action may include coaching, a written expectation, access restriction, reassignment, final warning, or termination.

Serious matters

The company may move directly to a serious corrective step for violence, harassment, retaliation, deliberate safety bypass, theft, falsification, intentional data disclosure, unauthorized production access, or other significant misconduct.

Raising a concern

- State the decision, behavior, or condition being challenged.
- Provide dates, records, witnesses, or other available evidence.
- Explain the requested correction or protection.
- Use People and Culture or the Ethics Channel if the manager is involved.

Good-faith protection

A report can be good faith even when it is not substantiated. Knowingly false statements or evidence manipulation are misconduct, but an honest mistake or incomplete information is not automatically a policy violation.

SECTION 19

Acknowledgement and policy contacts

Employees acknowledge receipt of the handbook through the People portal. Acknowledgement confirms access and responsibility to ask questions; it does not replace the employment agreement or create a guaranteed term of employment.

Policy owners

Topic	Primary owner	Contact route
Employment, leave, conduct	People and Culture	People portal
Security, identity, data	Information Security	Security Hotline
Laboratory and field safety	Health and Safety	Safety Hotline
Product quality	Quality and Reliability	Quality escalation
Ethics and conflicts	Legal and Ethics	Confidential Ethics Channel
Travel and expenses	Finance Operations	Expense portal

Interpretation

Only the policy owner may issue an authoritative interpretation. Informal team practice does not amend the handbook. Approved exceptions must be documented, time limited, and reviewed before renewal.

End of controlled document: HR-HBK-2025-v1.4. Printed copies are uncontrolled.
